Question 1

Which of the following should a security analyst do before communicating the results of a vulnerability test to stakeholders? Select three answers. 1 / 1 point

Use highly technical details

<mark>Choose an appropriate communications medium</mark>

Correct

A security analyst should choose an appropriate communications medium, consider the nature of the information that is being communicated, and use visual aids before communicating the results of a vulnerability test to stakeholders.

<mark>Use visual aids</mark>

Correct

A security analyst should choose an appropriate communications medium, consider the nature of the information that is being communicated, and use visual aids before communicating the results of a vulnerability test to stakeholders.

<mark>Consider the nature of the information that is being communicated</mark>

Correct

A security analyst should choose an appropriate communications medium, consider the nature of the information that is being communicated, and use visual aids before communicating the results of a vulnerability test to stakeholders.

Question 2

If a stakeholder fails to respond to an email in a timely manner, which communication steps are the next best options? Select two answers. 1 / 1 point

Report to the organization's Chief Information Security Officer (CISO)

<mark>Send an instant message</mark>

Correct

Sometimes an instant message or phone call can help move a situation forward. Direct communication is often better than waiting too long for an email response to a situation that needs immediate attention.

<mark>Make a phone call</mark>

Correct

Sometimes an instant message or phone call can help move a situation forward. Direct communication is often better than waiting too long for an email response to a situation that needs immediate attention.

Complain to human resources (HR)

Question 3

Fill in the blank: The use of _____ to tell a security story can help security analysts communicate impactful data and metrics. 1 / 1 point

 direct phone calls

 instant messages

cross-site scripting

<mark>visuals</mark>

Correct

The use of visuals to tell a security story can help security analysts communicate impactful data and metrics. Charts and graphs are particularly effective because they can be used to compare data points or show small parts of a larger issue.

Question 4

Which software programs can be used as tools for sharing and telling a visual story about data? Select all that apply. 1 / 1 point

Google Sheets

Correct

Google Sheets and Apache OpenOffice are both platforms that can be used to create and share visual stories of data.

 Linux

 Google Docs

Apache OpenOffice

Correct

Google Sheets and Apache OpenOffice are both platforms that can be used to create and share visual stories of data.
