Question 1
All security incidents should be equally prioritized. 1 / 1 point
True
False
Correct
Not all security incidents should be equally prioritized. Incidents that impact assets essential to business operations should take priority over other incidents.

Question 2
You've recently been hired as a cybersecurity analyst for an office supply organization. Which incident can have the most impact on the organization's operations? 1 / 1 point
An employee forgets their login credentials
The organization's guest Wi-Fi network is down
The organization's manufacturing network is compromised
A user's social media profile has the wrong birthday displayed
Correct
A manufacturing network is a major part of an organization's business operations. If it is compromised, it can lead to major financial loss.

Question 3
Fill in the blank: A(n) _____ is a set of actions that outlines who should be notified when an incident alert occurs and how that incident should be handled. 1 / 1 point
event
security incident
playbook
escalation policy
Correct
An escalation policy is a set of actions that outlines who should be notified when an incident alert occurs and how that incident should be handled.

Question 4
Which incident classification type occurs when an employee violates an organization's acceptable use policy? 1 / 1 point
Containment
Improper usage
Malware infection
Unauthorized access
Correct
The improper usage incident classification type occurs when an employee violates the organization's acceptable use policy.
