Question 1
What does a security mindset enable a security analyst to do when protecting their organization? Select two answers. N1 / 1 point

==Recognize what they are defending==

Correct

A security mindset enables an analyst to recognize what they are defending. It also helps them evaluate risks and identify potential system breaches.

Approve social media connections from security professionals

==Evaluate risks and identify potential system breaches==

Correct

A security mindset enables an analyst to recognize what they are defending. It also helps them evaluate risks and identify potential system breaches.

Evaluate employee retention

Question 2
Which type of asset would have the least impact on an organization if it were compromised? 1 / 1 point

Trade secrets

==Guest Wi-Fi network==

Intellectual property

Financial information

Correct

A guest Wi-Fi network is an asset that would have the least impact on an organization if it were compromised because an organization's business operations would experience little to no impact.

Question 3
How can security analysts cultivate a security mindset? 1 / 1 point

By signing non-disclosure agreements (NDAs)

By sharing sensitive information with those who request it

==By researching the latest security vulnerabilities==

By protecting public data from being accessed and shared

Correct

Security analysts can cultivate a security mindset by researching the latest security vulnerabilities. Staying updated about threats and vulnerabilities can help analysts take the necessary actions to prevent potential attacks from happening.

Question 4
Which of the following examples describes the use of a security mindset? Select two answers. 1 / 1 point

==Reporting suspicious emails==

Correct

Exercising suspicion before opening email attachments and reporting suspicious emails are examples of the use of a security mindset. A security mindset can help you identify and reduce security risks and potential incidents.

==Exercising suspicion before opening email attachments==

Correct

Exercising suspicion before opening email attachments and reporting suspicious emails are examples of the use of a security mindset. A security mindset can help you identify and reduce security risks and potential incidents.

Reusing passwords for multiple accounts

Downloading email attachments from unknown senders
